// GF-PRIMO & SECONDO DOLLY

// GF-PRIMO & GF-SECONDO DOLLY

ONE ELECTROMECHANICAL COLUMN WITH A CHOICE OF TWO BASE DOLLIES

GF-PRIMO DOLLY

- One touch gearbox for selecting front, rear and crab steering
- Telescopic and inclining steering rod
- Steering from 5 points

GF-SECONDO DOLLY

- Front, rear and crab steering through individual wheel adjustment
- Telescopic steering rod
- Steering from 4 points

GF-PRIMO DOLLY & GF-SECONDO DOLLY FEATURES

- Wireless or cable connected ergonomic hand control
- Fast and easy mount »drop & go« battery system
- Multifunctional turnstile mount
- Versatile platform system
- Rideable Jib mode in combination with the GF-Primo Jib
- Electromechanical, rotatable and removable column (lifts from 70 cm/27" to 140 cm/54" in 2.5 sec.)
- Wireless frequency 2,4 GHz FHSS
- Typical indoor range 30 m/outdoor range 200 m
- 9 wireless radio channels

- Hand control display shows speed, ramp, lift range, battery status etc.
- Drive ramp selection
- Setting of markers and limits
- Constructed of the highest quality CNC machined parts with Hart-Coat® finish
- TÜV Certified and Safety Type Tested

3 STEERING MODES & INDIVIDUAL MOVEMENT CONTROL

Both the GF-*Primo* and GF-*Secondo* can switch over to crab, front or rear wheel steering. The steering rods can be set to the Dolly Grip's preferred working position. The HCU fits snuggly into the steering handle to enable comfortable and user-friendly operation. Interchangeable steering rods between both the GF-*Primo* and GF-*Secondo* Dolly.

GF-Secondo steering selector

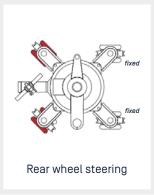

Telescopic steering rod

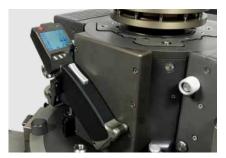

WIRELESS OPERATION

State-of-the-art, wireless operation via the ergonomic hand control gives the operator perfect control of the column's lift. The informative display is clear and easy to understand, showing the operational status. Speed and drive ramp adjustment as well as setting limits and the recording of movement sequences are easy to implement.

Holder for HCU

With cable connected HCU

Wireless mode

ROTATABLE & REMOVABLE COLUMN

The GF-*Primo* Column is rotatable and can be separated from the base dolly for easy transportation.

Base plates with a Euro-adapter or a turnstile mount are available and can be fitted to the base dolly. In turn, risers, seat arms etc can be mounted, resulting in a mobile mini-base dolly.

The dollies accept base plates and the electromechanical column

»DROP & GO« BATTERY CONNECTION

The 24 Volt batteries are simply slotted into position, secured and you're ready to go.

MULTIFUNCTIONAL TURNSTILE MOUNT

In addition to the main, adjustable seat, the multifunctional turnstile mount accepts 3 adapters to provide more seating and camera positions than other central column dolly e.g. two persons, two cameras. By attaching standard GFM accessories such as the Combi-rig, high/low rigs, off-set brackets etc directly onto the turnstile mount, changing the camera position in relationship to the camera operator is a simple matter.

This function combined with the rotatable column enables position adjustments of the camera without any great effort, creating a flexible and comfortable working situation.

PNEUMATIC »BIG« WHEELS

The all-terrain, quick release, pneumatic »BIG« wheels are a unique feature only available with GFM dollies. They attach to the studio wheels, without tools, and clamp on in seconds with a special claw, locking design. They provide extra ground clearance for transport and shooting on rough terrain [max. payload 130 kg/286 lbs].

Quick mount ... No tools And go!

THE ULTIMATE PLATFORM SYSTEM

The multifunctional platform set is machined from solid, high grade aluminium with rows of threaded (12 mm and 3/8") and non-threaded holes (12, 25 and 28 mm). The perfect tool for mounting various adapters such as low shot plates, lighting stands, monitor holders, seat arm extensions, counter weight rods etc.

Special adapters are available for attaching scaffold tubes directly to the platforms, providing even more rigging options. The unique locking system utilizes the base dolly's carry handles, ensuring a fast and no-play connection.

With low rigs

Off-set adapters

High platform

Low platform

Attach weight rods

Lighting, Euro- and scaffold adapters

Carry handles also secure platforms

THE GF-LOW PLATFORM SYSTEM

GFM's Low platform system provides variable heights plus an expansion of the standing room on the dolly base. The multifunctional platform set is machined from solid, high grade aluminium and provides a selection of threaded [12 mm and 3/8"] and non-threaded holes [12, 25 and 28 mm] as well as elongated slots. Track or skateboard wheels can be attached for use on straight track. It is a 2-part construction. The main section of the platform to be used with the standard 4-piece platform set, providing a larger standing area. The platform can carry 100 kg.

Fast and easy mounting

Extends standard platform

Low platform system with skateboard wheels

GF-PRIMO JIB

Designed to carry 1 or 2 persons plus camera, the GF-*Primo* Jib is a stable, modular jib ideal for working on tight sets. Mounted on the GF-*Primo* or GF-*Secondo* Dolly, it provides a lift range of 154 cm/5' and with the rotatable bearing in both base dollies, 360° of smooth endless panning is possible, a feature enhanced by the GF-*Primo*'s wireless mode.

GF-7400 GF-Primo Jib including:

middle section, rear arm, weight carrier, rods, High/Low Rig and platform with turnstile mount

TECHNICAL SPECIFICATIONS	
Max. payload	
with High/Low rig	200 kg / 440 lbs
without High/Low rig	250 kg/550 lbs
Lift range	154 cm/5'
Max. platform height	260 cm/8'8"
